Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, 18, and 22, drawn to a method of using a fusion protein comprising a latency associated peptide and proteolytic cleavage site for providing latency to a pharmaceutically active agent, classified in 530, subclass 350⁺.
- II. Claims 6-9, and 17, drawn a nucleic acid construct, a cell, and a method of preparing a fusion protein by expression in a host cell, classified in class 435, subclass 320.1 and 69.1⁺.
- III. Claims 10-15 and 23, drawn to a pharmaceutical composition comprising a nucleic acid construct and a method of treating inflammatory disorder using the pharmaceutical composition, classified in class 514, subclass 44.
- IV. Claims 16, 19-21, and 24, drawn to a pharmaceutical composition comprising a fusion protein, classified in class 514, subclass 12.

The inventions are distinct, each from the other because:

Invention I and either of invention II or III are mutually exclusive and independent. The method of invention I is neither needed for the nucleic acid construct of invention II, nor the treatment of an inflammatory disease using the pharmaceutical composition of invention III, and vice versa. Each of the methods requires a separate and materially different protocol.

Inventions I and IV are distinct. Invention I can be used to treat inflammation. Invention IV can be used to produce antibodies.

Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be

Art Unit: 1632

used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the nucleic acid of Invention II can be used in a nucleic acid hybridization assay.

Inventions II and IV are materially different and separate. The nucleic acid of invention II is not needed for the composition of invention IV, and vice versa.

Invention III and IV are mutually exclusive and independent. The pharmaceutical composition of Invention III and Invention IV are materially different and separate. Neither the composition of invention III nor the composition of invention IV is needed to implement each other.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, because of their recognized divergent subject matter, and the search required for any group is not required for remaining groups, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
